Wild Beauty

What happens here

Wildflower seeds are collected from onsite stock beds, meadow and selected local rural sites, then propagated each season by the wildflower team.

Wildflower plants are grown by our specialists with their trainee teams and sold through wholesale & retail.

Waterside Phragmites production is an important activity for our trainees and grown to support the stock offer for conservation planting.

We have years of experience producing Phragmites and
Luzula's ideal for wetland wildlife
Used for stabilising margins of lakes and
rivers
Traditionally used for thatching

Phragmites
produced in
root trainers
and matured
for planting

We can advise on quantities
and site suitability

Tree Nursery

- Mires Beck is situated on a 14 acre conservation site, on which over 4000 trees have been planted as part of the conservation programme which continues to develop as we plan for the future. We are working in conjunction with certified bodies to improve our commercially grown supply and have a large stock of British varieties available. We can supply large volumes with enough lead time notice and can undertake site visits to agree requirements. We have at any one time approximately 60,000 trees grown in root trainers ready for planting.
